

Elluminate® technologies provide in-class web, video, and audio solutions for real-time online learning. This technology provides a collaborative environment that delivers outcomes, including more interactive learning experiences. Faculty are currently using the technology for their virtual office hours, to conduct hands-on demonstrations of complex operations/subjects or to interact with students at distant locations. The College has acquired one-thousand licenses for Elluminate and the use of this technology is expected to increase as more faculty and staff become aware of the many capabilities within the software. Training in the use of Elluminate will continue through 2010. Currently, the Computer Technologies Program is employing Elluminate for virtual office hours and interactive presentations to students at a distance.
