EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

In March 2008, Fayetteville Technical Community College [FTCC] contracted with MBAJ Architecture to update their facilities utilization study and campus master plan. MBAJ Architecture has significant experience in facilities planning for higher education.

The goals of this study were to verify use of current campus facilities; determine and quantify needs for additional space; determine a plan for best use of current facilities; determine needs for future space; and create a campus master plan for facilities development. All of these goals have been accomplished and are addressed in this report.

Process

The FTCC administrative team was oriented to the study update during a session conducted on the FTCC campus by John Thomas of MBAJ Architecture. Prior to development of the Facility Master Plan, the College developed a Long Range Plan based upon the 2007 requirements of the North Carolina Community College System Office (NCCCS). A component of the Long Range Plan focused upon 2007 – 2013 enrollment and demographic projections for the college, and population projections by age group for the college service area. The analysis and methodology for these projections can be found in the College's Long Range Plan. This data was used to create a ratio that links enrollment growth to campus space in projecting future space needs.

Following this orientation, MBAJ examined FTCC's Long Range Plan (LRP) to understand the current enrollment trends and the updated internal and external program needs of the college. Through a series of sessions held in March and April 2008, MBAJ worked with the administrative team to update their current needs list for each campus and develop the space requirements necessary to implement the Key Implications of the LRP in the Facility Master Plan. A Summary of the current needs identified is contained in the section of this report titled *Program of Current Space Needs*.

MBAJ Architecture completed the drawings of campus facilities and prepared spreadsheets that show current square footage, as well as deficiencies in square footage, for each area of the college. With all facility data in hand, the consultants began the task of developing recommendations for meeting current and projected space needs.

METHODOLOGY OF STUDY

METHODOLOGY OF THE STUDY

Standard practice is that an architectural facilities study will produce the primary elements of a master plan for facilities development, a plan for best use of current facilities, and a determination of needs for future space. The MBAJ Architecture facilities study directly correlates to the College's Long Range Plan to provide a comprehensive plan that assesses the demand for programs and for services that will be offered in college facilities.

A college is wise to embark on a facilities planning process for a variety of reasons, not the least of which is the growing scarcity of funds for constructing new facilities. There is growing accountability from the various publics for most efficient use of current facilities. Additionally, distance learning and other non-traditional forms of instruction are altering the way colleges and universities deliver their products, which in turn, have impact on space usage. Constant updates and redesign of community college offerings, as well as the mandate for regional offerings, are other factors that affect facilities usage. Finally, the Southern Association of Colleges and Schools (SACS) require that each accredited institution include facilities planning as a part of its institutional effectiveness process.

Through a completely interactive process that provides opportunity for involvement by faculty and staff, the MBAJ Architecture facilities study is conducted in three components. The first component is an assessment of the Long Range Plan that takes into account current and anticipated needs of every offering at the college as well as the demographics and anticipated growth projections from 2007 - 2013. The second component is identification and assessment of the current use of facilities and final component is the development of a campus master plan to meet the current needs of the college and the needs outlined in the key implications of the FTCC Long Range Plan.

MBAJ Architecture used several approaches to data gathering for the FTCC study. One focus of data gathering included an assessment of the current use of program spaces on campus. During discussions, the consultants clarified the use by each department/ division of current space. For the purposes of the study, use of a space 75 percent of the time or more assigns ownership of that space to a particular purpose or group. Ideally, there is far more shared space than "owned" space.

In addition, MBAJ identified the projected enrollment growth from the Long Range Plan and overlaid this data with the current space usage and current space needs to assess how much space should be needed to support the projected enrollment numbers. By working with the college to identify current and future program space impacts on campus, MBAJ was able to validate the overall space projections.

LONG RANGE PLAN

LONG RANGE PLAN (LRP) SUMMARY

FTCC is one of the largest of the 58 colleges in the NC Community College System and enrolls nearly 38,000 students per year in curriculum and continuing education offerings. Established in 1961, the college serves Cumberland County, an area unique to the state with its large population of military personnel and their families.

Equally unique is the impact on the area of military base changes nationwide. Military personnel and the military-related population will expand here by as many as 40,000 persons over the next four to five years as BRAC (Base Realignment and Closure) shifts military personnel, jobs and companies to the Fayetteville/Cumberland County area.

As identified in the Fayetteville Technical Community College's [FTCC] Long Range Plan, the college should anticipate a 11.5% growth in Curriculum FTE, a 12.8% increase in Basic Skills FTE and a 12.9% increase in Occupational Extension over the next five years. Enrollment increases and new program offerings will place greater space needs on the college's two existing campuses and satellite centers which are already pushed to capacity.

FTCC has identified Key Implications for the future enrollment projections and program offerings over the next five years. Those implications identify the need for additional satellite campuses to serve high growth areas and growth in existing programs including Health Technologies, Trade Specific Vocational / Skills Training, Technology and Simulation / Gaming.

The Key Implications of the Long Range Plan implications are the basis of the Facility Master Plan. FTCC's top three Capital Priorities greatly enhance the college's ability to address the Key Implications and provide critical space for program growth. The priority projects include space for all of the programs identified above and general classrooms for both Curriculum and Continuing Education programs.

TOTAL STUDENT SERVICES SPACE NEED: 1,200 Net Sq Ft

GENERAL ASSESSMENTS

GENERAL ASSESSMENTS

1. Most space deficits are based upon current needs and future program offerings. New spaces should be designed with flexibility in mind so that shop/lab spaces can be utilized by more than one program if possible.
2. Relocate related offices and department/division support spaces adjacent to, or near one another for most efficient use of space.
3. Provide for adequate equipment and use of space. Renovate classrooms and labs to facilitate up-to-date teaching and technology so that any program can use a general classroom. All new spaces should include up-to-date technology.
4. Provide adequate storage adjacent to lab or multipurpose spaces so that multiple programs can utilize the same space and move specialized equipment in and out of adjacent storage rooms.

ANALYSIS OF SPACE

ANALYSIS OF SPACE INCLUDING CURRENT AND PROJECTED NEEDS

The Existing Space Assignments by Building and Current Space Assessments with Future Projections for Fayetteville Technical Community College can be found in Appendix A and Appendix C, respectively. The projected space need for each department/division and program is directly proportional to the demographic projections for the service area. The current space need (actual space used plus needed space) was multiplied by a growth factor for the year 2013. This growth factor is the ratio of projected enrollment increases identified in the college's Long Range Plan based on Fall 2007 enrollment by program.

Meeting the current and future space needs will require phasing of projects. Located in Appendix C are charts labeled Current Space Assessment with Future Projections that depict the current space need versus the projected space need for the campus.

The projected enrollment growth presents the college with the challenge of meeting the current space need and planning for future space needs, while continuing to educate students in the existing facilities. In addition to shifting programs from one facility to another, the college will need to find new space for departments/divisions that do not have sufficient space for growth in their current location. Additionally, the college must consider the way in which education will be delivered in the future and how technology and education trends will affect future development of space. Recent trends have suggested that future space might have more to do with the design and flexibility than the quantity of space.

RECOMMENDATION ANALYSIS

RECOMMENDATION ANALYSIS

Master Plan Scenario

Referenced Documents:

- Program of Current Space Needs
- Appendix A: Current Site Plan and Existing Space Assignments by Building
- Appendix C: Current Space Assessments with Future Projections
- Appendix D: Proposed Phased Master Plans

Introduction

Currently, Fayetteville Technical Community College devotes 599,483 square feet of assignable space to program and/or service functions. The Current Space Assessment spreadsheets contained in Appendix C indicate an additional need of 112,520 assignable square feet to meet current program and service demands. In five years, given the projected growth rate for the College's service area, the college-wide FTE enrollment is projected to increase by 11.5 percent in Curriculum, 12.8 percent in Basic Skills, and 12.9 percent in OCC. This enrollment growth will increase the amount of additional space needed by FTCC to a total of 195,537 assignable square feet. These projections assume that the college adds no new programs or services to its present offerings. Naturally, the square footage requirements and project priorities would be altered if the college chooses to offer new programs or services, particularly without eliminating others.

It is important to note that the assignable projected space deficits for the year 2013 are net amounts that represent only assignable program or service space. Thus, they do not include any area required by code for building support features such as restrooms, mechanical and electrical systems, corridors, and walls. The Gross Space Assessment Summary Table (Appendix C) uses a common factor of forty percent (40%) to arrive at a total gross square footage need. The college's gross space deficit for the year 2013 is projected to be 273,752 square feet.

The following pages contain the recommended approach that Fayetteville Technical Community College should consider when trying to meet the projected five year space deficit at each campus. The recommendations propose not only new facilities but also renovations and additions to the college's existing facilities. The relocation of existing programs or services to different locations on campus in addition to new construction will help the college meet its long-range space needs.

All construction will create a "domino effect," which requires that certain changes must occur first before additional events can take place. It is important to note that new buildings (not additions) could be less difficult to phase and more economical to build since new construction could be consolidated to a few areas and not spread throughout the campus, as would be the case with additions and renovations to existing buildings. Also, with funding and political uncertainties, the actual timing of this scenario could vary greatly.

Fayetteville Technical Community College has taken great care in creating a beautiful and pedestrian-friendly campus. Any additions and new construction must fit within the existing campus context, so as not to interfere with the existing character. The following pages represent an architectural master plan that would take a number of years to fully implement. This master plan becomes a working document that should be updated as the college experiences new growth in population and begins to offer new programs.

PROPOSED SPACE ORGANIZATION

PROPOSED SPACE ORGANIZATION TO MEET PROJECTED NEEDS

PHASE I (CAPITAL PRIORITY #1)

New Satellite Campus

Health Technologies Center Renovation

Phase I of the proposed FTCC master plan includes a new **Satellite Campus**, and renovations to the **Health Technologies Center** on the Fayetteville Campus.

Fayetteville Technical Community College will experience significant growth over the next four to five years as BRAC (Base Realignment and Closure) shifts military personnel, jobs and companies to the Fayetteville/Cumberland County area. The resulting requirements for new space to meet this demand cannot be completely accommodated within the limited undeveloped land remaining on the colleges existing campuses. The college has identified the several areas of the county as potential locations for such a satellite campus. A new Satellite Campus in will allow FTCC to meet several needs identified in the Long Range Plan including expansion of its Health Technology programs and additional Curriculum and Continuing Education classroom and lab space.

The construction of a new satellite campus will allow some Health Technology programs to be relocated in whole or in part from the Fayetteville Campus. Relocation of these programs will allow FTCC to expand some existing health programs and bring others into accreditation compliance within the existing Health Technologies Center on the Fayetteville Campus.

NEW SATELLITE CAMPUS BUILDING

- Relocate Health Technology programs from the existing Health Technologies Center.
- Provide Dental lab(s), Classroom, Program Support spaces, and storage.
- Provide Nursing Lab(s) Program Support spaces, and storage
- Provide (3) Immersion Environment labs and storage.
- Provide a 250 seat Lecture Hall.

- Provide (20) 30-seat Classrooms in a “Classroom of the Future” configuration.
- Provide a Biology Lab, prep space and storage.
- Provide a Chemistry Lab, prep space and storage.
- Provide (12) General Computer Labs.
- Provide a Student Lounge.
- Provide a Library.
- Provide a Bookstore
- Provide a Multi-purpose Room
- Provide an Office Suite with campus administration, students services, faculty offices, adjunct faculty space, conference room, and support.
- Provide new utility services for water, sewer and fire protection.
- Provide new sidewalks, entrance plazas, vehicular access to the building and landscaping.

HEALTH TECHNOLOGIES CENTER RENOVATION

- Relocate Health Technology programs to the new Satellite Campus.
- Renovate the vacated space to expand the Surgical Technology program to meet the current and future space needs.
- Renovate the vacated space to expand the Nursing programs to meet the current and future space needs.
- Renovate the vacated space to expand the Dental programs to meet the current program accreditation space needs.

PHASE I SPACE SUMMARY

| | |
|----------------------------|-----------------------------------|
| NEW SPACE PROVIDED: | 75,000 square feet (gross) |
| RENOVATED AREA: | 8,100 square feet (gross) |

PHASE II (CAPITAL PRIORITY #2)**Former Service Merchandise Building Renovation****Tony Rand Student Center Renovation****Thompson Library Renovation****Criminal Justice Center Renovation**

Phase II of the proposed FTCC Master Plan includes renovation of the former **Service Merchandise Building** recently purchased by the college and renovations to the **Tony Rand Student Center**, **Thompson Library** and the **Criminal Justice Center**.

The growth of FTCC's student population and program offerings has resulted in the construction of several new buildings. These new facilities have addressed the pressing classroom and lab needs of the college, but have not addressed the growing student services and student support needs of the college. FTCC has purchased a former **Service Merchandise Building** on Fort Bragg Rd contiguous to the Fayetteville Campus property. This building will be renovated to accommodate the Campus Bookstore and Campus Security. The building will also be home to the college's Criminal Justice programs and provide expansion space for the college's digital media programs. The design of the renovation for this property is currently funded and is underway. The space vacated by these programs in the **Tony Rand Student Center**, **Horace Sisk Building**, **Thompson Library** and the **Criminal Justice Center** will allow for the required expansion of Student Services; Faculty Support; Campus Call Center and Campus Recruiter areas.

FORMER SERVICE MERCHANDISE BUILDING

- Relocate the Campus Bookstore from the Tony Rand Student Center.
- Relocate Campus Security from the Tony Rand Student Center.
- Relocate the Campus Call Center from the Horace Sisk Building.
- Relocate the Campus Recruiters from the Thompson Library.
- Relocate the Criminal Justice program space from the Criminal Justice Center
- Provide (7) general use 25-station computer lab.
- Provide a 70-seat Classroom
- Provide (1) Latent Evidence Labs
- Provide (3) 30-seat Classrooms.
- Provide (21) 40-seat Classrooms.
- Provide an Office Suite with faculty offices, adjunct faculty space, conference room, and support.
- Provide 150 additional parking spaces to meet the requirements for this building.
- Provide new sidewalks, entrance plazas, vehicular access to the building and landscaping.

TONY RAND STUDENT CENTER RENOVATION

- Relocate the Campus Bookstore and Campus Security Center to the Service Merchandise Building.
- Renovate the vacated space to expand Financial Aid, Admissions, Counseling, Registration and Enrollment Support Services.
- Upgrade building wide plumbing, mechanical and electrical building systems

THOMPSON LIBRARY RENOVATION

- Relocate the Campus Recruiters to the Tony Rand Student Center.
- Reassign the vacated space to Faculty Offices.
- Replace existing roof system.

THOMPSON LIBRARY RENOVATION

- Relocate the Campus Call Center to the Tony Rand Student Center.
- Reassign the vacated space to Faculty Offices.

PHASE III (CAPITAL PRIORITY #3)**New Industry Training Center****Cumberland Hall Renovation****Advanced Technology Center Renovation****Center for Business & Industry Renovation****Neill Currie Building Renovation****Lafayette Hall Renovation**

Phase III of the proposed FTCC Master Plan includes a new **Industry Training Center** and **renovations to Cumberland Hall, Advanced Technology Center, Center for Business & Industry, Neill Currie Building and Lafayette Hall** for Curriculum and Continuing Education program classrooms, labs, and support spaces.

The large influx of personnel to Cumberland County associated with Base Realignment and Closure (BRAC) will bring with them new industry and an increased demand for housing. As a result of these issues, the FTCC Long Range Plan anticipated significant growth in vocational and Trade-specific training over the next five years. In particular construction related program offerings need to be enhanced and expanded to meet this anticipated demand.

Construction of a new **Industry Training Center** will allow the college to consolidate and expand Trade-Specific Vocational Curriculum and Continuing Education Programs. The center will be home to a new Building Construction Center to consolidate and expand construction related programs, a new Transportation Center to consolidate and expand vehicle repair programs, and classrooms and labs to support Continuing Education programs. Construction of the Center will require On-Campus and Off Campus road improvements to provide better entrance to the campus, improve on-campus vehicular circulation, meet the requirements of the City of Fayetteville and the requirements of the North Carolina Department of Transportation.

Cumberland Hall will be renovated to provide new Fine Arts labs and general classrooms in the space vacated by the Building Trades program.

The **Advanced Technology Center** will be renovated to provide expanded space for the Campus Facility Operations Center in the space vacated by the Automotive program.

The **Center for Business & Industry** will be renovated to consolidate the College's Continuing Education Administration and Registration functions, provide new Customized Training Labs for local industry and new Continuing Education Classrooms / Labs in the space vacated by the Small Business Center and Construction Training Programs.

The **Neill Currie Building** will be renovated to provide on-campus space for the Military Business Center, the relocated Small Business Center, and a new Small Business Incubator in the space vacated by the Continuing Education Administration.

Lafayette Hall will be renovated to provide Faculty Offices and Campus Storage in the space vacated by the Campus Facility Operations.

NEW INDUSTRY TRAINING CENTER

- Relocate the Building Trades programs from Cumberland Hall.
- Relocate the Construction Training Programs from the Center for Business & Industry.
- Relocate and expand the Automotive & Heavy Truck Programs from the Advanced Technology Center.
- Provide Auto Body Lab(s).
- Provide (8) 30-seat Classrooms in a "Classroom of the Future" configuration.
- Provide (6) General Computer Labs.
- Provide (2) 100-seat Lecture Halls.
- Provide an Immersion Environment Lab and storage.
- Provide an office suite with faculty offices, adjunct faculty space, conference room, and support.
- Provide new utility services for water, sewer and fire protection.
- Provide new sidewalks, entrance plazas, vehicular access to the building and landscaping.

CUMBERLAND HALL RENOVATION

- Relocate Building Trades programs to new Industry Training Center
- Provide Fine Arts Painting & Sculpture Lab(s)
- Provide (2) 40-seat Classrooms
- Provide (4) 30-seat Classrooms
- Upgrade building wide plumbing, mechanical and electrical building systems

ADVANCED TECHNOLOGY CENTER RENOVATION

- Relocate Automotive Repair and Heavy Truck Repair programs to new Industry Training Center.
- Relocate Campus Facility Operations Center from Lafayette Hall
- Replace Emergency Generator.

CENTER FOR BUSINESS & INDUSTRY RENOVATION

- Relocate Continuing Education Construction Training programs to new Industry Training Center.
- Relocate Continuing Education Industry Training programs to new Industry Training Center.
- Relocate Small Business Center from the Center for Business & Industry to Neill Currie Building.
- Relocate Continuing Education Administration and Registration from Neill Currie Building to Center for Business & Industry.
- Provide Customized Training Lab(s) for local industry.
- Provide Continuing Education Classroom(s) & Lab(s).

NEILL CURRIE BUILDING RENOVATION

- Relocate Continuing Education Administration and Registration to Center for Business & Industry.
- Relocate Military Business Center from Barges Tavern off-campus to Neill Currie Center.
- Relocate Small Business Center from Center for Business & Industry to Neill Currie Center.
- Provide Small Business Incubator.

LAFAYETTE HALL RENOVATION

- Relocate Campus Facility Operations to the Advanced Technology Center.
- Provide Faculty Offices
- Provide Campus Storage

PHASE III SUMMARY

| | |
|-----------------------------------|------------------------------------|
| NEW SPACE PROVIDED: | 118,000 square feet (gross) |
| RENOVATED AREA: | 67,900 square feet (gross) |
| PM&E SYSTEMS UPGRADES: | 78,000 square feet (gross) |

PHASE IV

Lafayette Hall Addition and Renovation

Phase IV of the proposed FTCC master plan includes additions and renovations to

Lafayette Hall.

The growth of curriculum programs will put additional pressure on existing science lab facilities. This need will be alleviated through the construction of a science addition to Lafayette Hall and renovation of the existing chemistry labs and creation of a new physics lab in the existing facility.

LAFAYETTE HALL ADDITION

- Provide (3) Biology Labs
- Provide a Bio-Technology Lab.
- Provide Faculty Support spaces

LAFAYETTE HALL RENOVATION

- Upgrade (2) Existing Chemistry Labs
- Provide Physics Lab
- Upgrade building wide plumbing, mechanical and electrical building systems

PHASE IV SUMMARY

| | |
|-----------------------------------|-----------------------------------|
| NEW SPACE PROVIDED: | 13,000 square feet (gross) |
| RENOVATED AREA: | 5,000 square feet (gross) |
| PM&E SYSTEMS UPGRADES: | 59,000 square feet (gross) |

PHASE V

New Fine Arts / Conference Center

New Parking Deck

Phase V of the proposed FTCC campus master plan includes construction of a new **Fine Arts / Conference Center** and a **Campus Parking Deck**.

The construction of a new Fine Arts / Conference Center will provide FTCC with expanded capabilities to host large events on campus to benefit students and expand the colleges presence in the community. The center will include a 1,500 seat auditorium, expo space, multi-purpose rooms and convention support areas.

Parking is an on-going concern at FTCC. The construction of the new Fine Arts Center will require the construction of significant additional parking that cannot be accommodated using ground lots without the purchase of additional property. The construction of a parking deck will allow FTCC to maximize the available land and help limit the impervious footprint of the college.

NEW FINE ARTS / CONFERENCE CENTER

- Provide a 1,500 seat Auditorium with working stage and performance support spaces.
- Provide a 300 seat black box theater.
- Provide (6) Fine Arts Labs
- Provide an art gallery for student display and traveling shows
- Provide a Conference Expo Center
- Provide (4) Multi-Purpose Rooms
- Provide (6) Conference Rooms for breakout programs
- Provide a Catering Kitchen

Parking Deck

- Provide a parking deck for up to 400 spaces

PHASE V SUMMARY

NEW SPACE PROVIDED: 110,000 square feet (gross)

PHASE VI**New Campus Boundary Road**

The anticipated growth of programs and student enrollment at FTCC will bring many opportunities and many challenges. Accommodating the movement of vehicles on to campus and exiting campus is currently a significant issue that will become increasingly problematic as the campus grows. The construction of a Boundary Road on the west side of campus will alleviate some of the internal circulation issues and provide an additional point of campus entry.

SPACE ASSESSMENT SUMMARY

SPACE ASSESSMENT SUMMARY

Summary of College-Wide Space Deficit:

| | | |
|---------------------------------|----------------|--------------------------|
| Current Space Deficit: | 157,528 | gross square feet |
| Year 2013 Space Deficit: | 273,752 | gross square feet |

Summary of New Space Recommended:

Phase I (CP#1)

| | |
|----------------------|--------------------------|
| New Satellite Campus | 75,000 gross square feet |
|----------------------|--------------------------|

Phase II (CP #2)

| | |
|-------------------------------------|--------------------------|
| Former Service Merchandise Building | 70,000 gross square feet |
|-------------------------------------|--------------------------|

Phase III (CP#3)

| | |
|------------------------------|---------------------------|
| New Industry Training Center | 118,000 gross square feet |
|------------------------------|---------------------------|

Phase IV

| | |
|--------------------------------------|--------------------------|
| Lafayette Hall Addition & Renovation | 13,000 gross square feet |
|--------------------------------------|--------------------------|

Phase V

| | |
|-----------------------------------|---------------------------|
| New Fine Arts / Conference Center | 109,000 gross square feet |
|-----------------------------------|---------------------------|

Phase VI

| | |
|----------------------|---------------------|
| Campus Boundary Road | 0 gross square feet |
|----------------------|---------------------|

Total New Space Provided

385,000 gross square feet
(276,000 gsf linked to LRP deficit)

ADDITIONAL RECOMMENDATIONS

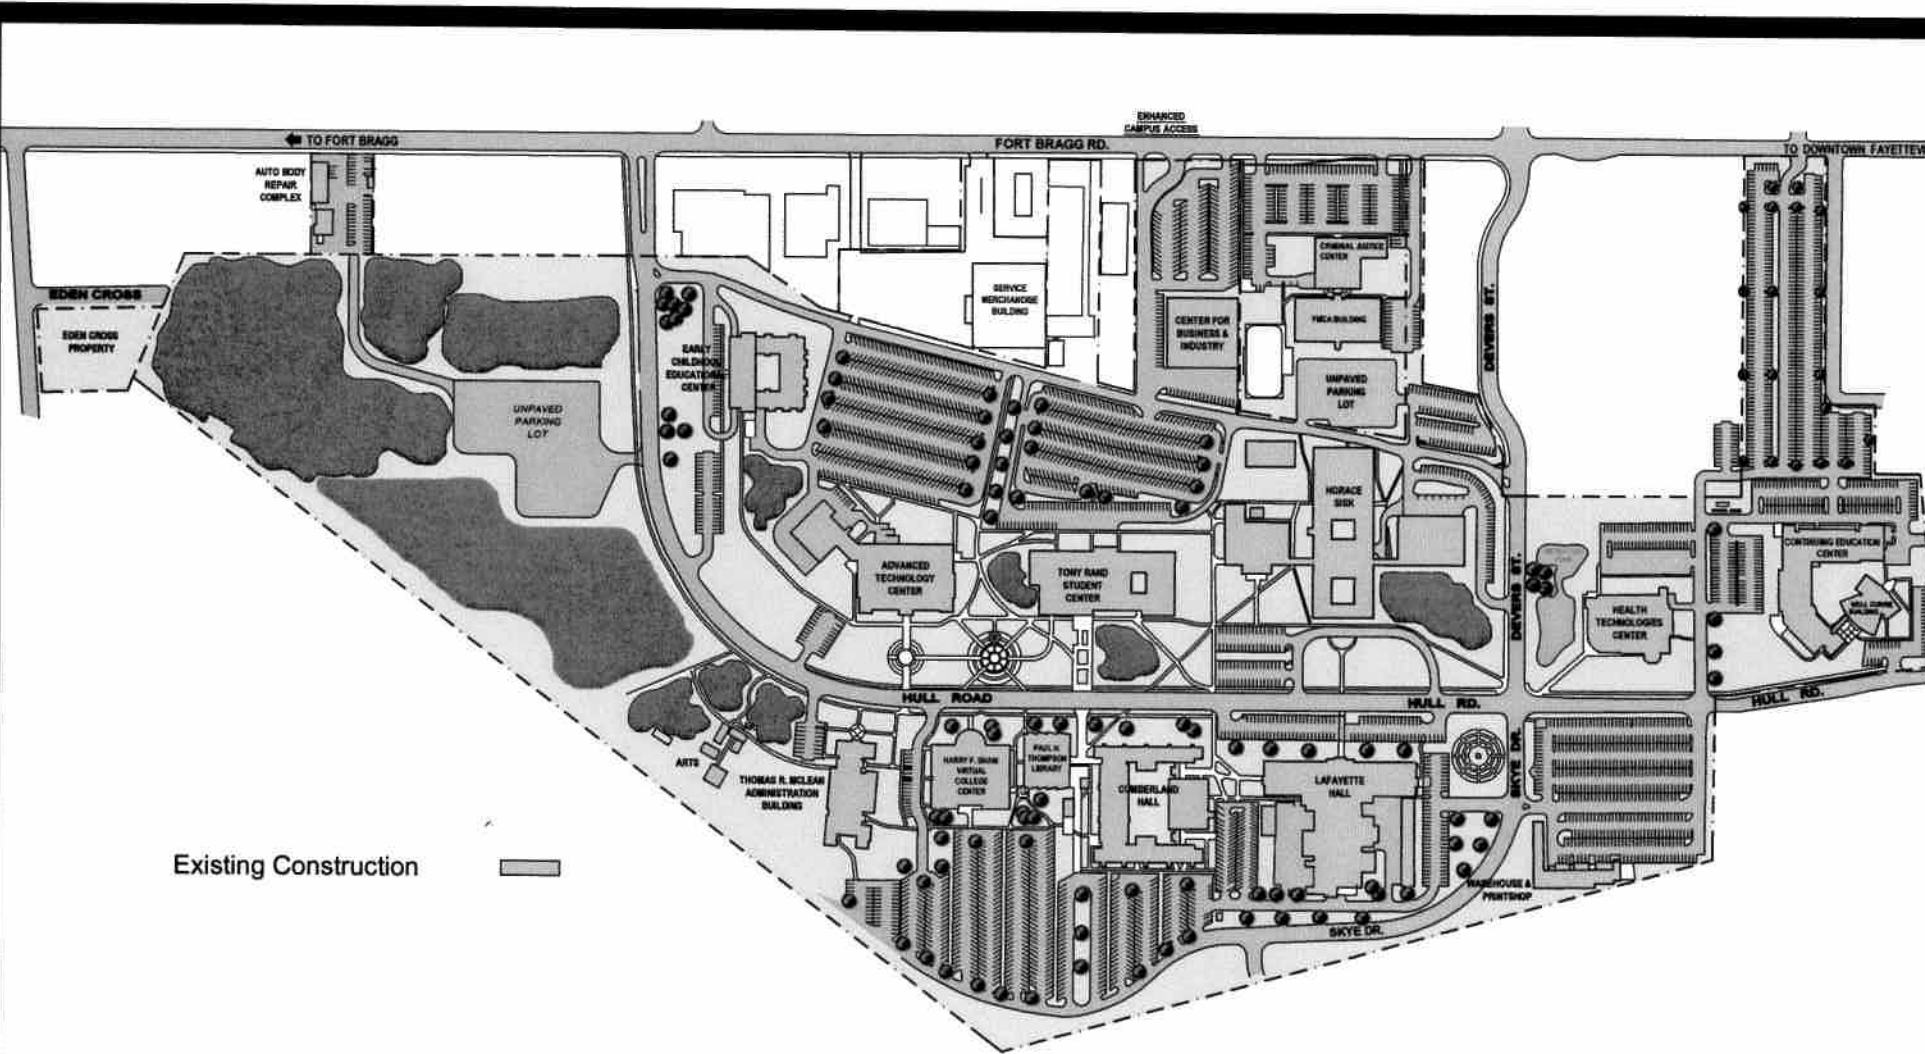

ADDITIONAL RECOMMENDATIONS

1. **Additional Property:** FTCC is a vital part of the community and will continue to grow in enrollment and programs over time. The Fayetteville Campus has limited undeveloped space for the construction of new facilities. The college should continue to identify and purchase adjacent properties to rehabilitate for college use or demolish for new construction projects.
2. **Campus Entry:** A focal point is needed to draw attention to the main entrance to the campus on Fort Bragg Road. Aside from letting the public know "where" FTCC is, such a focus would provide ongoing awareness for those traveling this busy boulevard.
3. **Access Road:** The majority of car traffic entering FTCC's campus arrives from the south creating a large concentration of vehicles at one point of entry. The College should consider development of a second access road extending to Morganton Road on the southeast end of campus.
4. **Bus Shelters:** FTCC currently hosts three City of Fayetteville bus stops: one on Devers Street and two on Hull Road. It is recommended that the College work with the City to install bus shelters at these locations.
5. **Parking:** FTCC has a large amount of parking distributed over the campus and in locations not easily observed from the major campus thoroughfares. The college should consider development of secure, Faculty Only parking lots and an access control system. The parking located at the Warehouse should be reconfigured to allow a proper turning configuration for large trucks and delivery vehicles.
6. **Video Surveillance:** The current state of world affairs has brought enhanced security consciousness to all aspects of our daily lives. In keeping with the current trends, the College should continue expanding its video surveillance capabilities.

FROM: CLH Design, P.A.
RE: FAYETTEVILLE TECH. COMMUNITY COLLEGE
FACILITIES MASTER PLAN
CC: (08-127/design)

Priority Projects

Project 1: ‘Satellite Campus’

- At the time of this facilities master plan project, the site for the new facility was unknown. Upon the design phase of this project, it will be prudent to work with the City of Fayetteville to design to meet all City codes for parking, storm water management, sewer, water, utilities, setback requirements, and landscaping requirements to meet site plan approval. Likewise, the City Traffic engineer and DOT should be consulted for necessary roadway improvements to facilitate the campus expansion.

Priority 2: ‘Service Merchandise’

Background

The site for Priority Two is along Fort Bragg Rd. and formerly housed a 2 story Service Merchandise Store, a small pharmacy and a single story commercial building. All are zoned industrial. Because of their former uses the majority of the parcels are paved and utilities are on site.

Existing Site Conditions

General:

The site is 5.33 acres, located on the north side of Access Rd. across from two major parking lots. The one story commercial building will be demolished as will the pharmacy building leaving clear view of the Service Merchandise building from Fort Bragg Rd. FTCC wishes to use this as an opportunity to create a campus presence along the main thoroughfare, however, the loading dock faces the road and would not present the desired appearance for the college. Existing driveway cuts will be used to access the site from Fort Bragg Rd.

- **Parking** – There are 126 spaces for the Service Merchandise Building.
- **Utilities** – An 8” water line and a 8” sewer line serve the Service Merchandise Building.
- **Stormwater Management** – 15” and 18” stormwater pipes are currently on site. They flow to the City stormwater infrastructure system along Fort Bragg Rd.
- **Topography** – The site is fairly flat with small walls between the properties and a small drainage culvert near Access Road.

- **Circulation and Wayfinding** – Relocating the loading dock will require alternate delivery truck access to the site. FTCC does not wish to mix student traffic with the delivery trucks, so a cross access agreement will be developed with the owner of the neighboring Major Appliance Building. Trucks will enter campus from Fort Bragg Rd on the existing FTCC entrance road, and turn right onto a drive across the Major Appliance site to access the loading dock. Three of the driveway cuts on Fort Bragg Rd will be closed.

Proposed Building Renovation:

- **Building Use:** The Service Merchandise will be renovated to house classrooms, the bookstore and campus security.
- **Building Square Footage:** Total square footage of the building is 70,000, with the following breakdown:
 - Classrooms-26,075 sf
 - Storage-2,200 sf
 - Faculty Offices – 1,500 sf
 - Bookstore – 13,570 sf
 - Security – 1,935 sf.
 - Other/Core – 24,720 sf

The site allows for a future classroom addition of 22,800 sf.

- **Parking and Circulation Requirements:** The Service Merchandise renovation will require 141 spaces total to meet the City of Fayetteville’s code requirements. The classroom addition will require an additional 76 spaces. Total parking required for the build out is 217 spaces which the site can support.
- **Utilities:** Adequate utilities serve the site.
- **Storm Water Management:** Because the current zoning is industrial and the site is mostly paved, the renovations will actually decrease the amount of impervious surface to meet the City’s landscaping requirements. Also, FTCC wants the site to be a symbolic gateway for the campus on Fort Bragg Rd. and wishes to front the thoroughfare with landscape rather than parking and additional paving.
- **Earthwork:** Earthwork required consists of demolition and fine grading. The previous uses of the site negate nominal earthwork.
- **Signage:** A ground sign will be located on Fort Bragg Rd.

Project 3: ‘New Industry Tech Training Facility

- **Parking and Circulation Requirements:**
 - **Parking** – The parking requirement per the City of Fayetteville is (1) space per 300 square feet of building space. The combined building space of the proposed Industry Training Center, Transportation Center and Auto Annex is approximately 118,000-sf. In order to meet code requirements, 394 new parking spaces are required.

A new parking lot is scheduled to be completed by July 31 that will provide an additional 400 spaces. The parking lot is located north of the Continuing Education Center. FTCC is also currently researching a potential land acquisition with Vaughn Memorial Presbyterian Church at the corner of Fort Bragg Rd. and Devers St.

- **Circulation** - The campus has existing circulation and parking problems. There are high traffic volumes on Hull Rd. and the FTCC Access Road that connects Hull Rd. and Devers St. The FTCC campus experiences the highest traffic volume between the hours of 7:30 am and 1:00 pm. NCDOT has concerns with morning traffic problems

on Morganton Rd. The City of Fayetteville will not grant site plan approval for this project until circulation is improved, both on and off site. The City has indicated to CLH that at this time, they will not grant additional driveway cuts on Fort Bragg Rd for FTCC for future projects.

The following has been proposed to improve internal circulation; Extend Skye Dr. along the west side of the campus to create a boundary road that will connect with either Eden Cross or Hull Rd. The estimated cost of this boundary road is \$500,000. This cost is based on a new road beginning at the existing parking lot south of the Thomas Mclean Administration Building westward through the former horticulture area. The proposed route goes between the western property line and existing greenhouses. The route is also extremely close to the adjacent neighborhood. Property setbacks, building setbacks and buffer setbacks will need to be verified in this area. Adjacent property owners will need to be notified of the proposed route. The greenhouses may also need to be relocated to keep this route.

NCDOT is also suggesting a entrance to the campus from Morganton Rd. The area in question is off-site, so FTCC will need to investigate acquiring the land.

There is also the possibility for a future cul-de-sac in the curve on Hull Rd. (should Hull road be closed) that will eliminate the connection to Fort Bragg Rd. This will eliminate through traffic from the adjacent neighborhood(s).

- ***Infrastructure Upgrades (water and sewer, etc.)*** - The proposed additions at Fayetteville Tech pose no problems with existing water and sewer on site. Fayetteville Public Works Commission (PWC) has provided information showing an 8" water line that parallels Hull Road, as well as a 6" water line that runs along Fort Bragg Road. The auto body annex building would tap directly into the 6" line on Fort Bragg Road, and the industry training center will tie into the 8" line on Hull Road. Each building will require a fire loop with hydrants. With future growth of Fayetteville expected, PWC has ensured us that water distribution in this area will not be a problem.

PWC has also provided sewer information on or around the campus. The FTCC site is located in the Cross Creek Basin. The Cross Creek Waste Reclamation Facility is permitted at 26 Million Gallons per Day (MGD) and the present average daily flow for that facility is 12 MGD. Therefore wastewater treatment capacity is not an issue. Currently on campus there is a 12" gravity main flowing north along Devers St. and then East Fort Bragg Road. There is also 8" sewer line that parallels Fort Bragg Road and ties into the previously mentioned 12" gravity main. The auto body annex will tie directly into this 8" line for sewer service. The industry training center will have a gravity sewer line that parallels Hull Road and ties directly into the before mentioned 8" sewer line on Fort Bragg Road. PWC provided that there will be no downstream lift stations from the campus. In addition, PWC ensures that there will be capacity issues with this 12" gravity main or the downstream interceptors.

The cost of the water and sewer systems includes but is not limited to cost of pipe per linear foot, manholes, cleanouts, meters, backflow preventers, etc.

- ***Stormwater Management*** - Fayetteville Tech is located on the dividing line between Hybarts Branch (Class C) and Little Cross Creek (Class WS-IV-PA) watersheds. The area of proposed improvements is located inside the Water Supply Watershed boundary that drains to Little Cross Creek. WS-IV Watershed Protected Areas require

storm water detention with the treatment of 85% TSS (Total Suspended Solids). In addition, WS-IV requires that no development shall be more than 70% impervious. The pre-development state of the campus is 52% impervious. As the existing pervious pavement lots have met or exceeded their projected lifespan, they have been included in our calculations as impervious surfaces. The post-development state of the campus, after additional buildings, parking, roadways, and site amenities, will be ~55%. The campus will still remain under the 70% impervious threshold.

Based upon the new drainage areas associated with the campus improvements including the new industry training center, auto body annex, new roadways, and associated parking, two storm water BMP's (pond) would be required. The first storm pond would treat the auto annex building area, and would require an approximate surface area of 1,425 square feet. A much larger storm pond will be required to treat the industry training center, parking area, and roadway additions; this proposed pond will require a surface area of approximately 13,200 square feet.

The required treatment of 85% TSS can be accomplished using alternate BMP's that would require less space. With the campus being tight for space, underground treatment is an additional option. The existing topography and soil conditions would control whether this option is feasible. Please note that studies have shown that the cost of underground detention is in the range of six times.

- **Earthwork** – The topography in the immediate area of the proposed improvements is relatively flat. There is a large stand of existing pine trees that will need to be cleared and an existing gravel parking area that will need to be demolished to allow construction of the Industry Training Center and associated parking. There may be some monetary value to the stand of existing pine trees. The Owner may want to investigate having the trees timbered prior to clearing and grubbing activities.

Based on the USGS topographic quadrangle map, the campus is on a ridge. The area is within a WS-IV Protected Water Supply Watershed boundary and drains to Hybarts Branch to the south and Little Cross Creek to the north. There does not appear to be a stream or wetlands in the immediate area of the proposed improvements.

- **Off-site Roadway Improvements** – Based on conversations with the City of Fayetteville and NCDOT, off-site roadway improvements could vary. The possibilities range from the following:
 - 1) The closure of the Skye Dr. entrance and the installation of a new entrance on Morganton Rd;
 - 2) No entrance at all onto Morganton Rd;
 - 3) Widening for dual lefts off of Morganton Rd. onto Skye Dr. and widening Skye Dr. to accept the dual lefts.

The construction costs of the proposed improvements could cost between \$500,000 and \$750,000. Please note that the improvements are subject to review by NCDOT and the City of Fayetteville and depend on the final development, master plan and traffic conditions at that time. A traffic impact analysis (TIA) will be required to determine the scope of the actual improvements. The cost provided is subject to change based on existing conditions, right-of-way acquisition, utility relocation and any other site specific items.

TABLE OF CONTENTS

| Description | Section |
|-----------------------------------|----------------|
| ENGINEERING INTRODUCTION | I |
| BUILDING EVALUATION SHEETS | B |
| CENTRAL HVAC PLANTS | H |

Summary

The engineered systems included in this master plan are:

**PLUMBING
FIRE SPRINKLER
HVAC
ELECTRICAL
CENTRAL HVAC PLANTS**

This engineering master plan is undertaken to evaluate existing building systems and to recommend modifications and/or replacements in order to improve and/or expand the function of these systems within the context of a future overall building renovation/addition project. This engineering master plan is intended to be used as a companion document for the architectural campus master plan separately prepared by MBAJ Architecture.

This engineering master plan was based on: 1) review of facility as-built drawings (where available); and 2) cursory field surveys of existing campus buildings. The survey of each building was brief, in that for the purposes of this master plan, a broad-based overview of facilities infrastructure conditions is all that is required. Only major engineering components were reviewed for condition and possible expansion/modification. Code compliance analysis was not included in this engineering master plan. Due to the broad nature of this master plan, field survey evaluations were based on visual observation to determine approximate age of the equipment and overall condition. These methods are not capable of identifying concealed or non-obvious conditions. This engineering master plan summarizes the existing infrastructure system types, age, condition, expandability, and includes a very basic opinion of construction cost for the system renovation/replacement recommendation.

Only facilities identified by MBAJ Architecture in FTCC's long range plan for additions or renovations are included in this engineering master plan. Accordingly, the facilities evaluated as part of this engineering master plan were limited to the following buildings on the main campus of Fayetteville Technical Community College in Fayetteville, NC:

| Building Name | Year Constructed | Gross Area | Floors |
|---------------------------------------|------------------|------------|--------|
| Advanced Technology Center | 1991 | 84,412 | 2 |
| Center for Business & Industry | 1988 | 31,770 | 1 |
| Criminal Justice Center / Cosmetology | 1964 | 16,201 | 1 |
| Cumberland Hall | 1976 | 78,168 | 2 |
| Lafayette Hall | 1961 | 58,929 | 1 |
| Neill Currie Building | 1961 | 10,532 | 1 |
| Rand Student Center | 1988 | 49,486 | 1 |

TOTALS (7 Buildings): 329,498

Additionally, central HVAC plant systems on the main campus were reviewed in order to identify current connection points, capacities and opportunities for future expansions and connections.

Please understand that the cost opinions included in this engineering master plan study are our opinions of probable construction costs, and because we have no control over costs or the price of labor, equipment or materials, contractors' methods of determining bid prices, competitive bidding, market or negotiating conditions, we cannot warrant the accuracy of our cost opinion with regard to actual construction cost. Also, please note our Cost Breakdowns do not include any expenses necessary to identify, evaluate, handle or dispose of hazardous materials (asbestos, lead paint, etc.). Hazardous materials may exist where there is no reason to believe they could or should be present, therefore a detailed evaluation of hazardous materials should be made prior to any renovation projects. Hazardous material identification was not included in this engineering master plan.

END OF ENGINEERING INTRODUCTION SECTION

Summary

The BUILDING EVALUATIONS included herein are in tabular form referencing key components of the following systems:

PLUMBING
FIRE SPRINKLER
HVAC
ELECTRICAL

These BUILDING EVALUATIONS identify system types, age, general condition, expandability, and recommendations within the context of a future planned building renovation. Cost opinions are generalized and are based on current cost data (no future escalation has been applied). Evaluations are included herein for the following FTCC main campus facilities:

Advanced Technologies Center
Center for Business and Industry
Criminal Justice Center / Cosmetology
Cumberland Hall
Lafayette Hall
Neill Currie Building
Rand Student Center

Rand Student Center

Fayetteville Technical Community College

Current Function: Student Center
Location: Main Campus
Year Built: 1988
Age: 20
Total Area (GSF): 49,486
Floors: 1

| System | Type | Age | Condition | Expandability | Recommendation | Cost Equation | Cost |
|--------------------------------------|------|-----|-----------|---------------|----------------|---------------|------|
| (assuming total building renovation) | | | | | | | |

Plumbing

| | | | | | | | |
|------------------------|---|--------|---|---------------------|--|-------------------|-------------------|
| Water service | 2-1/2" building main, meter at street | 20 | Adequate, main building valve old | Some spare capacity | Replace main valve | LS | \$ 5,000 |
| Sanitary sewer service | 4" mains exit three locations | 20 | OK | Some spare capacity | | | |
| Storm drainage | Flat roof drains | 20 | OK | | | | |
| Piping | Water: copper with fiberglass insulation. Waste: assumed cast iron | 20 | Old | | Replace | \$2.5 per SF | \$ 125,000 |
| Toilets | Group | 20 | Dated, non-accessible per current code, high flow fixtures | | Renovate to meet code (accessibility and low flow) | \$3 per SF | \$ 150,000 |
| Other fixtures | Kitchen & misc. building sinks | 20 | Older but adequate | | Replace | LS | \$ 50,000 |
| Hot water | Small local water heaters with re-circ pumps for building. (2) 250 gallon electric for kitchen. | varies | Varies | | Replace, consider gas for kitchen units | LS | \$ 25,000 |
| Backflow prevention | Double check (Watts) in janitor closet | 10+/- | Good, but does not meet code for building with kitchen (RPZ required) | | Replace | LS | \$ 5,000 |
| Fuel | Natural gas, steel pipe | 20 | Old, serves kitchen equipment | | Replace | LS | \$ 7,500 |
| Grease trap | Exterior below grade 500 gallons | 20 | Likely undersized by current standards | | Replace | LS | \$ 20,000 |
| SUBTOTAL | | | | | | 7.83 \$/SF | \$ 387,500 |

Fire Sprinkler

| | | | | | | | |
|-----------------|------|--|--|--|-----------------------------------|-------------------|-------------------|
| Description | None | | | | Add if preferred or code-required | \$3.5 per SF | \$ 175,000 |
| SUBTOTAL | | | | | | 3.54 \$/SF | \$ 175,000 |

HVAC

| | | | | | | | |
|-------------------|--|--------|--|---------------------|--|--------------------|---------------------|
| Primary heating | 4" Hot water from campus central plant (Mech Bldg) | 20 | OK | Some spare capacity | | | |
| Primary cooling | 5" Chilled water from campus central plant (Mech Bldg) | 20 | OK | Some spare capacity | | | |
| Secondary systems | (12) Single Zone Constant Volume Air Handling Units, central station, 4-pipe | 20 | Old, poor zoning, no reheat, no humidity control | | Replace with VAV system | \$15 per SF | \$ 750,000 |
| Exhaust | Local toilet exhaust, various types | 20 | Old | | Replace | \$1 per SF | \$ 50,000 |
| Duct | Steel lined with fiberglass | 20 | Old, likely dirty given interior insulation | | Replace | \$4 per SF | \$ 200,000 |
| Pipe | CHW / HW: steel pipe, fiberglass insulation | 20 | Old | | Replace | \$4 per SF | \$ 200,000 |
| Ventilation | Minimum OA to air handling systems | 20 | Too small | | Increase | | |
| Economizer | Air - no. | | Not compliant with current code | | Add | | |
| Kitchen Hood | Island-type, front compensating | 20 | Adequate, but flow issues | | Replace along with fans | LS | \$ 60,000 |
| Controls | DDC main (Landis-Gyr 6000), pneumatic actuators | varies | OK | | Upgrade DDC, replace pneumatic with electronic | \$2 per SF | \$ 100,000 |
| SUBTOTAL | | | | | | 27.48 \$/SF | \$ 1,360,000 |

Rand Student Center

Fayetteville Technical Community College

Current Function: Student Center
Location: Main Campus
Year Built: 1988
Age: 20
Total Area (GSF): 49,486
Floors: 1

| System | Type | Age | Condition | Expandability | Recommendation | Cost Equation | Cost |
|--------|------|-----|-----------|---------------|--------------------------------------|---------------|------|
| | | | | | (assuming total building renovation) | | |

Electrical

| | | | | | | | |
|---------------------------|--|----------|--|---|---|--------------------|---------------------|
| Service | 208Y/120V, 1200A Square D I-line style service panel board | 20 | Adequate | Service Panel has limited pole space and capacity for significant load addition. Space for new equipment is limited | Replace and upgrade service. | \$1 per SF | \$ 50,000 |
| Provider | PWC pad mounted transformer | 20 | Good | Limited | Transformer may need to be upgraded by PWC if significant load is added | | |
| Building secondary | Square D bolt-on style panelboards | varies | Marginal | Pole space is limited throughout the building. | Provide new panels and equipment connections as necessary to serve new loads | \$4 per SF | \$ 200,000 |
| Generator | None | | | | Provide a small 40kw generator to serve main campus telephone room and associated AC. | LS | \$ 25,000 |
| Fire alarm | Edwards Signal 5772 (hard wired) | 20 | Functional but does not meet current code. | Current System is not expandable. | Provide a new code compliant addressable system. | \$2.5 per SF | \$ 125,000 |
| Emergency egress lighting | Self contained battery units. No exit discharge lights. | 10 to 15 | Batteries may be outside anticipated lifetime | | Repair/replace emergency lights. Provide exit discharge lighting. | \$0.75 per SF | \$ 37,000 |
| Technology | Category 5e. | 7 to 10 | Good. Additional service entrance conduit/cable is needed. Building has main campus telephone switch. | Yes. Physical space needed. | Provided additional service duct bank and expand existing telephone closet. | \$2.5 per SF | \$ 125,000 |
| Interior lighting | F40, T12 Troffers | 20 | Acceptable, but does not meet current energy code. | Current switching may need to be supplemented with occupancy sensors and lighting controls. | Replace lighting and controls. | \$4 per SF | \$ 200,000 |
| Security | CCTV system, no card access system | 5 to 10 | Good. Current Main Campus Security located in this building, but it is to be moved to the Service Merchandise Building | System is expandable. | Add cameras. | \$0.75 per SF | \$ 37,000 |
| Devices | Specification Grade | 20 | Good | | Provide new/additional devices to correspond to renovations | \$1 per SF | \$ 50,000 |
| Kitchen Provisions | | 15 to 20 | Existing Kitchen Hood and associated power and fire alarm components are not up to current code. | | Upgrade to current code. | LS | \$ 30,000 |
| SUBTOTAL | | | | | | 17.76 \$/SF | \$ 879,000 |
| TOTAL | | | | | | 56.61 \$/SF | \$ 2,801,500 |

Cumberland Hall

Fayetteville Technical Community College

Current Function: Classrooms, Shops, Auditorium
Location: Main Campus
Year Built: 1976

Plumbing

| | | | | | | | |
|------------------------|---|--------|---|---------------------|--|--------------|------------|
| Water service | 2-1/2" building main | 32 | Adequate | Some spare capacity | | | |
| Sanitary sewer service | multiple mains exiting building | 32 | OK | Some spare capacity | | | |
| Storm drainage | Flat roof drains | 32 | OK | | | | |
| Piping | Water: copper with fiberglass insulation. Waste: assumed cast iron | 32 | Old | | Replace | \$3 per SF | \$ 234,000 |
| Toilets | Group | 32 | Renovated toilets not too bad. Possible accessibility & low-flow issues | | Renovate to meet code (accessibility and low flow) | \$1.5 per SF | \$ 120,000 |
| Other fixtures | Misc. building sinks | 32 | Older but adequate | | Replace | LS | \$ 50,000 |
| Hot water | Small local water heaters with re-circ pumps for building. | varies | Varies | | Replace | LS | \$ 20,000 |
| Backflow prevention | (no evidence of one) | | | | Provide | LS | \$ 8,000 |
| SUBTOTAL | | | | | | | |
| | | | | | | 5.53 \$/SF | \$ 432,000 |

Fire Sprinkler

| | | | | | | | |
|-----------------|------|--|--|--|-----------------------------------|--------------|------------|
| Description | None | | | | | | |
| SUBTOTAL | | | | | Add if preferred or code-required | \$3.5 per SF | \$ 280,000 |
| | | | | | | 3.58 \$/SF | \$ 280,000 |

HVAC

| | | | | | | | |
|-------------------|--|--------|---|---------------------|---|--------------|--------------|
| Primary heating | 5" Hot water from campus central plant (Mech Bldg) | 32 | OK | Some spare capacity | | | |
| Primary cooling | 6" Chilled water from campus central plant (Mech Bldg) | 32 | OK | Some spare capacity | | | |
| Secondary systems | Hodge-podge of systems (Single zone fan coil units, multizone units, HW radiators) | 32 | Nearly all equipment is original | | Replace with VAV system | \$15 per SF | \$ 1,200,000 |
| Exhaust | Local toilet exhaust. Minimal shop exhaust. | 32 | Old | | Replace and/or add | \$1.5 per SF | \$ 120,000 |
| Duct | Lined | 32 | Old, likely dirty given interior insulation | | Replace | \$4 per SF | \$ 316,000 |
| Pipe | CHW / HW: steel pipe, fiberglass insulation | 32 | Old | | Replace | \$4 per SF | \$ 316,000 |
| Ventilation | Minimum OA to air handling systems | 32 | Too small | | Increase | | |
| Economizer | Air - no. | 32 | Not compliant with current code | | Add | | |
| Controls | DDC (Landis-Gyr), some electric | varies | OK | | Upgrade DDC, replace electric with electronic | \$2 per SF | \$ 156,000 |
| SUBTOTAL | | | | | | | |
| | | | | | | 26.97 \$/SF | \$ 2,108,000 |

Cumberland Hall

Fayetteville Technical Community College

Current Function: Classrooms, Shops, Auditorium
Location: Main Campus
Year Built: 1976
Age: 32
Total Area (GSF): 78,168
Floors: 2

| System | Type | Age | Condition | Expandability | Recommendation (assuming total building renovation) | Cost Equation | Cost |
|---------------------------|--|--------|---|---|---|--------------------|---------------------|
| Electrical | | | | | | | |
| Service | Building Has (3) services - (480Y/277,800A, Federal Pacific), (208Y/120V Federal Pacific), (208Y/120V, Square D) | Varies | Varies from poor to marginal. Building is served from the same service lateral as the Chiller Plant and the Library. | Spare parts are no longer manufactured by Federal Pacific. Square D panel has limited pole space. | Provide a single service for the complete building, and separate service for chiller plant and library. Feed each building from a separate pad mounted transformer. | LS | \$ 250,000 |
| Provider | Services are fed from (2) PWC transformer Vaults - One is adjacent to the chiller plant building and the other is inside of Auditorium building. | 32 | Poor - Obsolete delivery method. Service to multiple buildings creates more significant outages. | Not expandable | Have PWC upgrade service transformers as part of renovations. | | |
| Building secondary | Federal Pacific, Westinghouse, Square D | Varies | Poor to Good | Spare parts are no longer available for Federal Pacific Panels. Other panels have limited pole space. | Replace all Federal Pacific panels and add additional panels. | \$4 per SF | \$312,000 |
| Generator | None | | | | Generator not required | | |
| Fire alarm | Simplex 4020 | 7 | Acceptable - Coverage is not to current code. | Expandable | Expand to renovated areas. | \$2 per SF | \$ 156,000 |
| Emergency egress lighting | Self contained battery lights. No exit discharge lights. | 2 | Good - coverage may need to be supplemented. | | Add emergency lights (as necessary). Provide exit discharge lights. | \$0.5 per SF | \$ 39,000 |
| Technology | Category 5e | 5 | Good - additional outlets may be required. | Expandable - Additional trunk conduit and cable may be required | Provide new/additional devices to correspond to renovations | \$1.5 per SF | \$ 117,000 |
| Interior lighting | F34 T12, F32 T8, Incandescent | Varies | Marginal - Much of the lighting is not energy efficient some fixtures have conditional issues. The dimmer system in the auditorium is obsolete. | Current switching may need to be supplemented with occupancy sensors and lighting controls. | Replace lighting and controls. Provide compact fluorescent fixtures and a new dimmer system in the Auditorium area. | \$4 per SF | \$ 312,000 |
| Security | None | | | | Provide a camera system similar to other buildings. | \$1.5 per SF | \$ 117,000 |
| Devices | Specification Grade | 20 | Good | | Provide new/additional devices to correspond to renovations | \$1 per SF | \$ 78,000 |
| SUBTOTAL | | | | | | 17.67 \$/SF | \$ 1,381,000 |
| TOTAL | | | | | | 53.74 \$/SF | \$ 4,201,000 |

Center for Business & Industry

Fayetteville Technical Community College

Current Function: Classrooms, Labs & Shops
 Location: Main Campus
 Year Built: 1988 (purchased & renovated)
 Age: 20+
 Total Area (GSF): 31,770
 Floors: 1

| System | Type | Age | Condition | Expandability | Recommendation | Cost Equation | Cost |
|--------------------------------------|------|-----|-----------|---------------|----------------|---------------|------|
| (assuming total building renovation) | | | | | | | |

Plumbing

| | | | | | | | |
|------------------------|---|--------|---|---------------------|---|-------------------|-------------------|
| Water service | 2" building main, meter at street | 20+ | Adequate | Some spare capacity | | | |
| Sanitary sewer service | 6" main to street | 20+ | OK | Some spare capacity | | | |
| Storm drainage | no piping (gutter) | | | | | | |
| Piping | Water: copper with fiberglass insulation. Waste: assumed cast iron | 20+ | Old | | Replace | \$2.5 per SF | \$ 80,000 |
| Toilets | Group | 20+ | Dated, non-accessible per current code, high flow fixtures | | Renovate to meet code (accessibility and low flow) | \$3 per SF | \$ 96,000 |
| Other fixtures | Misc. building sinks | 20+ | Older but adequate | | Replace | LS | \$ 15,000 |
| Hot water | Small local water heaters with re-circ pumps for building. | varies | Varies | | Replace, consider single gas unit | LS | \$ 15,000 |
| Backflow prevention | Double check (Watts) in storage closet | 20+ | Good, but may not meet code for building with shops (RPZ required) | | Replace | LS | \$ 5,000 |
| Fuel | Natural gas, steel pipe | 20+ | Old, serves HVAC equipment | | Replace | LS | \$ 5,000 |
| Oil interceptor | 500 gallons | 20+ | Evaluate need | | | | |
| Waste oil storage | 1,000 gallons | 20+ | Evaluate need | | | | |
| SUBTOTAL | | | | | | 6.80 \$/SF | \$ 216,000 |

Fire Sprinkler

| | | | | | | | |
|-----------------|---------------------------------------|--|-----|--|---------------------------------|-------------------|------------------|
| Description | Wet-pipe, 8" main, backflow at street | | Old | | Replace branch piping and heads | \$2.75 per SF | \$ 90,000 |
| SUBTOTAL | | | | | | 2.83 \$/SF | \$ 90,000 |

HVAC

| | | | | | | | |
|-------------------|--|--------|---------------------------------|--|--|--------------------|-------------------|
| Primary heating | Gas-fired re-heat coils | 20+ | Old | | Demolish and install HW boiler system | | |
| Primary cooling | Rooftop condensing units | 20+ | Old | | Demolish and connect to nearby chiller | | |
| Secondary systems | (4) Single Zone Constant Volume Air Handling Units, central station | 20+ | Old, very poor zoning | | Replace with 4-pipe VAV system | \$15 per SF | \$ 480,000 |
| Exhaust | Local toilet exhaust, Limited shop exhaust | 20+ | Old, poorly performing | | Replace toilet exhaust, add shop exhaust | \$2 per SF | \$ 64,000 |
| Duct | Steel wrapped with fiberglass | 20+ | Old, appears dirty at grilles | | Replace | \$4 per SF | \$ 128,000 |
| Pipe | Copper refrigerant piping | 20+ | Old | | Demolish, replace with 4-pipe system | \$4 per SF | \$ 128,000 |
| Ventilation | Minimum OA to air handling systems | 20+ | Too small | | Increase | | |
| Economizer | Air - no. | 20+ | Not compliant with current code | | Add | | |
| Controls | some DDC and some electric | varies | OK | | Upgrade DDC, replace electric with electronic | \$2 per SF | \$ 64,000 |
| SUBTOTAL | | | | | | 27.20 \$/SF | \$ 864,000 |

Center for Business & Industry

| System | Type | Age | Condition | Expandability | Recommendation | Cost Equation | Cost |
|--------------------------------------|---|--------|--|---|---|--------------------|---------------------|
| (assuming total building renovation) | | | | | | | |
| Electrical | | | | | | | |
| Service | 480Y/277V, 800A and 480Y/277V, 1600A service. 800A service feeds a 500kva transformer that feeds a 208Y/120V, 1600A switchboard. GE equipment | 20+ | Acceptable | System is expandable | Provide new breakers in existing gear for new loads. | \$1 per SF | \$ 32,000 |
| Provider | PWC Pad mounted transformer | 20+ | Acceptable | | | | |
| Building secondary | GE Panelboards, Square D load Centers | Varies | Marginal | Limited pole space available, especially at the lower voltage | Provide new panels to serve new loads | \$3 per SF | \$ 96,000 |
| Generator | None | | | | Generator not required | | |
| Fire alarm | Pyrotechnics CP-4 (hardwired) | 20+ | Poor - Coverage not to current code. | Panel is obsolete. | Provide a new code compliant addressable system | \$2.5 per SF | \$ 80,000 |
| Emergency egress lighting | Self contained battery lights. No exit discharge lights. | 2 | Good - coverage may need to be supplemented. | | Add emergency lights (as necessary). Provide exit discharge lights. | \$0.5 per SF | \$ 16,000 |
| Technology | Category 5 | 10 | Marginal - Additional outlets may be required | Yes, Additional trunk conduit and cable may be required. | Provide additional outlets, trunk conduit and cabling | \$1.5 per SF | \$ 48,000 |
| Interior lighting | F40 T12, Compact fluorescent retrofitted in incandescent fixtures. | 20+ | Poor to Marginal - Fxtures not energy efficient. | Current switching may need to be supplemented with occupancy sensors and lighting controls. | Replace lighting and controls. | \$3 per SF | \$ 96,000 |
| Security | None | | | | Provide camera system similar to other buildings. | \$1.5 per SF | \$ 48,000 |
| Devices | Commercial | 20+ | Marginal | | Provide new/additional devices to correspond to renovations | \$1 per SF | \$ 36,000 |
| SUBTOTAL | | | | | | 14.23 \$/SF | \$ 452,000 |
| TOTAL | | | | | | 51.05 \$/SF | \$ 1,622,000 |

Advanced Technologies Center

Fayetteville Technical Community College

Current Function: Computer Science & Automotive
Location: Main Campus
Year Built: 1991
Age: 17
Total Area (GSF): 84,412
Floors: 1 & 2

| System | Type | Age | Condition | Expandability | Recommendation | Cost | Cost |
|--------|------|-----|-----------|---------------|----------------|--------------------------------------|------|
| | | | | | | (assuming total building renovation) | |

Plumbing

| | | | | | | | |
|------------------------|---|--------|---|---------------------|--|--------------|------------|
| Water service | 4" building main, meter at street | 17 | OK | | | | |
| Sanitary sewer service | 6" main | 17 | OK | Some spare capacity | | | |
| Storm drainage | Flat roof drains | 17 | OK | Some spare capacity | | | |
| Piping | Water: copper with fiberglass insulation. Waste: assumed cast iron | 17 | OK | | | | |
| Toilets | Group | 17 | OK, likely some accessibility issues per current code, high flow fixtures | | Replace as per renovation | \$1.5 per SF | \$ 127,000 |
| Other fixtures | Misc. building sinks | 17 | OK, likely some accessibility issues per current code, high flow fixtures | | Renovate to meet code (accessibility and low flow) | \$2 per SF | \$ 168,000 |
| Hot water | Small local water heaters with re-circ pumps for building. | varies | Varies | | Renovate to meet code (accessibility and low flow) | LS | \$ 25,000 |
| Backflow prevention | RPZ at street | 17 | OK, but may not meet current local | | Replace as needed. | LS | \$ 8,000 |
| Fuel | Natural gas, steel pipe | 17 | OK, serves boiler | | Renovate to meet local ordinance | LS | \$ 7,000 |
| Air compressor | Serves auto shop | 17 | OK | | Replace as needed. | LS | \$ 5,000 |
| Oil interceptor | Exterior below grade | 17 | Condition unknown | | Renovate as needed | LS | \$ 5,000 |
| SUBTOTAL | | | | | | | |
| | | | | | | 4.09 \$/SF | \$ 345,000 |

Fire Sprinkler

| | | | | | | | |
|-----------------|------|--|--|--|-----------------------------------|--------------|------------|
| Description | None | | | | | | |
| SUBTOTAL | | | | | Add if preferred or code-required | \$3.5 per SF | \$ 300,000 |
| | | | | | | 3.55 \$/SF | \$ 300,000 |

HVAC

| | | | | | | | |
|-------------------|---|--------|--|---------------------|--|--------------|--------------|
| Primary heating | Cast iron HW boiler (Weil-McClain), pumps | 17 | OK | | | | |
| Primary cooling | Water cooled chiller (Carrier), cooling tower (BAC), pumps | 17 | Showing some age, efficiencies less than modern equipment | Some spare capacity | | | |
| Secondary systems | Central station, 4-pipe, air handling units: (3) constant volume - shop; (4) VAV - CR building. FP VAV Terminal w/ HW reheat. Mechanical room plenum. | 17 | OK, except mechanical room plenum code violation, and some systems undersized for computer labs. | Some spare capacity | Retain until failure | | |
| Exhaust | Local toilet exhaust. Minimal shop exhaust. | 17 | Inadequate shop exhaust. | | Replace as per renovation. Fix mechanical room plenum. Increase system capacities where necessary. | \$11 per SF | \$ 930,000 |
| Duct | Lined | 17 | Dirty given interior insulation | | Improve toilet exhaust where needed. Add shop exhaust. | \$1.5 per SF | \$ 128,000 |
| Pipe | CHW / HW: steel pipe, fiberglass insulation | 17 | OK | | Replace | \$4 per SF | \$ 340,000 |
| Ventilation | Minimum OA to air handling systems | 17 | OK | | Replace as per renovation | \$2.5 per SF | \$ 215,000 |
| Economizer | Air - no. Water - yes. | 17 | | | | | |
| Computer room AC | Split system downflow (raised floor) | 17+ | Adequate | | Consider adding air economizer. | LS | \$ 70,000 |
| Controls | DDC main (Landis-Gyr 6000) | varies | OK | | Upgrade when needed | | |
| SUBTOTAL | | | | | Upgrade DDC as necessary | \$1 per SF | \$ 85,000 |
| | | | | | | 20.94 \$/SF | \$ 1,768,000 |

Advanced Technologies Center

Fayetteville Technical Community College

Current Function: Computer Science & Automotive
Location: Main Campus
Year Built: 1991
Age: 17
Total Area (GSF): 84,412
Floors: 1 & 2

| System | Type | Age | Condition | Expandability | Recommendation | Cost | Cost |
|---------------------------|--|----------|---|---|---|--------------------------------------|--------------|
| | | | | | | (assuming total building renovation) | |
| Electrical | | | | | | | |
| Service | 480Y/277V, 2000A, Square D QED Style Switchboard. | 17 | Good | Pole space is limited in main switchboard. | Upgrade existing service. | \$1 per SF | \$ 85,000 |
| Provider | PWC pad mounted transformer | 17 | Acceptable | System is expandable | N/A | | \$ - |
| Building secondary | Square D bolt-on style panelboards | 17 | Good | Due to limited pole space additional panelboards will have to be provided as part of any renovation | Provide additional panelboards and equipment connections to serve new loads | \$5 per SF | \$ 422,000 |
| Generator | 100 KW Generac Interior Diesel Generator | 17 | Poor - Generator is no longer functional or connected to campus server loads. Multiple ATS's will have to be provided for "Life Safety" and "Standby" (computer loads). | No | Provide minimum 300 KW generator and associated power distribution components to serve Life safety loads, main server room electrical equipment, and main computer room Air Conditioning loads. | LS | \$ 135,000 |
| UPS | Powerware 315 (40kw), Leibert (40 kw) | varies | Functional | UPS intended to serve main campus server room is supplemented by an additional UPS that also serves other areas of the building | Provide a larger 80 kw UPS dedicated to the main server room. Retain other UPS's to serve remaining areas of the building. Install in appropriately cooled areas. | LS | \$ 120,000 |
| Fire alarm | Simplex 4100U (currently being installed) | 0 | Brand New | Yes | Expand as required. | \$2.0 per SF | \$ 170,000 |
| Emergency egress lighting | Self Contained battery units. No exit discharge lights | 10 to 15 | Batteries may be outside anticipated lifetime | N/A | Repair/replace emergency lights. Provide exit discharge lighting. | \$0.75 per SF | \$ 64,000 |
| Technology | Category 5e | varies | Marginal - Building includes main campus server room which has capacity issues (see Generator and UPS) and the need for additional pathway and entrance cabling. | Ample space for additional server equipment. | Provided additional ductbank and cable to expand connection to existing campus wide area network. Provide electrical connections to computer room suppression | \$3.25 per SF | \$ 275,000 |
| Interior lighting | F40,T12 Fluorescent | 17 | Marginal - does not meet current energy code, many fixtures look old and dirty. Fixtures in auto shop need to be enclosed. | Current lighting controls may need to be supplemented with occupancy sensors and other lighting controls. | Replace lighting and controls. | \$3 per SF | \$ 253,000 |
| Security | Altronix (CCTV), Schlage (Card access system) | 5 to 10 | Good | Yes | Expand existing systems. | \$1 per SF | \$ 84,000 |
| Devices | Specification Grade | 17 | Marginal | Some devices showed reasonable wear. Devices in auto shop need to be greater than 36" above floor. | Provide new/additional devices to correspond to renovations | \$1 per SF | \$ 84,000 |
| SUBTOTAL | | | | | | 14.04 \$/SF | \$ 1,185,000 |
| TOTAL | | | | | | 42.62 \$/SF | \$ 3,598,000 |

| Primary cooling | Water cooled chiller (McQuay), cooling tower (BAC), pumps | 20+/- | Showing some age, efficiencies less than modern equipment | Some spare capacity | Retain until failure | | |
| Secondary systems | Mostly 4-pipe (some split systems). Constant Volume Air Handling Units (shops, some labs, some offices). Unit ventilators (classrooms). | varies | Recently replaced units are OK. Classroom unit ventilators original equipment - poorly performing. | | Replace with VAV systems, except recently renovated labs. | \$13 per SF | \$ 780,000 |
| Exhaust | Local toilet exhaust, various types. Minimal shop exhaust. | varies | Mostly old | | Replace and/or add | \$2 per SF | \$ 120,000 |
| Duct | Steel, mostly lined. | varies | Likely dirty where interior insulation | | Replace old duct | \$3 per SF | \$ 180,000 |
| Pipe | CHW / HW: steel pipe, fiberglass insulation | varies | Original pipe is very old | | Replace old pipe/insulation | \$3 per SF | \$ 180,000 |
| Ventilation | Minimum OA to air handling systems | varies | Too small | | Increase | | |
| Economizer | Air - no. | varies | Not compliant with current code | | Add | | |
| Welding hoods | booth type | ? | Adequate, but possible flow issues | | Upgrade as needed | LS | \$ 20,000 |
| Controls | DDC with some electric | varies | OK | | Upgrade DDC, replace electric with electronic | \$2 per SF | \$ 120,000 |
| SUBTOTAL | | | | | | 23.76 \$/SF | \$ 1,400,000 |

Lafayette Hall

Fayetteville Technical Community College

Current Function: Sciences, Shops, Offices
 Location: Main Campus
 Year Built: 1961
 Age: 47
 Total Area (GSF): 58,929
 Floors: 1

| System | Type | Age | Condition | Expandability | Recommendation (assuming total building renovation) | Cost Equation | Cost |
|---------------------------|--|--------|--|---|---|--------------------|---------------------|
| Electrical | | | | | | | |
| Service | Building has (2) services - (208Y/120V, 1600A, GE Switchboard), (208Y/120V, 1000A Square D panelboard) | varies | Poor to Acceptable - The GE switchboard is past its anticipated lifetime. | Limited | Provide a new service that combines the existing services. | \$1.5 per SF | \$ 90,000 |
| Provider | (2) PWC pad mounted transformers | varies | Acceptable | Limited | Provide a new transformer large enough for complete building. | | |
| Building secondary | GE panelboards, Square D Panelboards, Square D load centers | varies | Poor - Most panels are in need of replacement. There are a lot of panels due to the amount of shop equipment. | Not Expandable | Replace panels as part of renovations. | \$6 per SF | \$ 360,000 |
| Generator | None | | | | Generator not required | | |
| Fire alarm | Simplex 4100U (Currently being installed) | 0 | Brand New | Yes | Extend to renovated areas | \$1 per SF | \$ 60,000 |
| Emergency egress lighting | Self contained battery lights. Some remote head exit discharge lights. | 2 | Marginal - Coverage will need to be supplemented. | N/A | Add emergency lights (as necessary). Provide exit discharge lights. | \$0.5 per SF | \$ 30,000 |
| Technology | Category 5e | 5 | Good - additional outlets may be required. | Expandable - Additional trunk conduit and cable may be required | Provide new/additional devices to correspond to renovations | \$1 per SF | \$ 60,000 |
| Interior lighting | F40 T12, F32 T8 | varies | Poor to Good - Most of the building has non energy efficient fixtures in poor condition. Daylighting in corridors provides an opportunity for photocell control. | Current lighting controls may need to be supplemented with occupancy sensors and other lighting controls. | Provide new lighting and controls | \$4 per SF | \$240,000 |
| Security | None | | | | Provide camera system similar to other buildings. | \$1.5 per SF | \$ 90,000 |
| Devices | Specification Grade | varies | Good | | Provide new/additional devices to correspond to renovations | \$1 per SF | \$ 60,000 |
| SUBTOTAL | | | | | | 16.80 \$/SF | \$ 990,000 |
| TOTAL | | | | | | 51.49 \$/SF | \$ 3,034,000 |

Criminal Justice Center / Cosmetology

Fayetteville Technical Community College

Current Function: Criminal Justice / Cosmetology
 Location: Main Campus
 Year Built: 1964 (FTCC purchased 2003)
 Age: 44
 Total Area (GSF): 16,201
 Floors: 1

NOTE: This evaluation sheet includes information which assumes completion of the CJC / Cosmetology renovation (80% of building) due by the end of 2008.

| System | Type | Age | Condition | Expandability | Recommendation | Cost Equation | Cost |
|--------|------|-----|-----------|---------------|----------------|---------------|------|
|--------|------|-----|-----------|---------------|----------------|---------------|------|

Plumbing

| | | | | | | | |
|------------------------|---|-------|----|---------------------|---------------------------------------|------------|-----------|
| Water service | 2-1/2" main from street to mech room | 44 | OK | Limited | | | |
| Sanitary sewer service | 6" main to street | 44 | | Some spare capacity | | | |
| Storm drainage | Flat roof drains | 44 | OK | | | | |
| Piping | Water: copper with fiberglass insulation. Waste: assumed cast iron | 0-44 | OK | | Minor reno for remaining 20% of bldg. | LS | \$ 16,000 |
| Toilets | Group toilets renovated 2008 | 0 | OK | | | | |
| Other fixtures | Misc sinks / Cosmetology plumbing | 0 | OK | | | | |
| Hot water | Gas, atmospheric | 10+/- | OK | | | | |
| Backflow prevention | Exterior in enclosure above grade | 5 | OK | | | | |
| Fuel | Natural gas (boiler) | | OK | | | | |
| SUBTOTAL | | | | | | 0.99 \$/SF | \$ 16,000 |

Fire Sprinkler

| | | | | | | | |
|-----------------|------|--|--|--|-----------------------------------|---------------|-----------|
| Description | None | | | | Add if preferred or code-required | \$3.50 per SF | \$ 57,000 |
| SUBTOTAL | | | | | | 3.52 \$/SF | \$ 57,000 |

HVAC

| | | | | | | | |
|-------------------|--|---|----|-----------------------------------|---------------------------------------|------------|-----------|
| Primary heating | Cast Iron Hot Water Boiler (atmospheric) | 4 | OK | Sections could be added if needed | | | |
| Primary cooling | New 3" CHW from CBI Chiller Plant | 0 | OK | Limited | | | |
| Secondary systems | New 4-pipe VAV, 3 AHU's | 0 | OK | More flexible than expandable | Minor reno for remaining 20% of bldg. | LS | \$ 81,000 |
| Exhaust | New | 0 | OK | | | | |
| Duct | Mostly new, all wrapped | 0 | OK | | | | |
| Pipe | New CHW / HW: steel pipe, fiberglass | 0 | OK | | | | |
| Ventilation | New | 0 | OK | | | | |
| Economizer | Air-yes, Water-no | 0 | OK | | | | |
| Controls | New DDC | 0 | OK | | Minor reno for remaining 20% of bldg. | LS | \$ 8,000 |
| SUBTOTAL | | | | | | 5.49 \$/SF | \$ 89,000 |

Criminal Justice Center / Cosmetology

Fayetteville Technical Community College

Current Function: Criminal Justice / Cosmetology
 Location: Main Campus
 Year Built: 1964 (FTCC purchased 2003)
 Age: 44
 Total Area (GSF): 16,201
 Floors: 1

NOTE: This evaluation sheet includes information which assumes completion of the CJC / Cosmetology renovation (80% of building) due by the end of 2008.

| System | Type | Age | Condition | Expandability | Recommendation | Cost Equation | Cost |
|---------------------------|---|--------|---|--|---|--------------------|-------------------|
| Electrical | | | | | | | |
| Service | 208Y/120V, 600A, Square D panelboard | 1 | Good | Limited | Provide a new service is load is increased significantly | LS | \$ 24,000 |
| Provider | PWC 500 kva transformer | 15 | Acceptable | Expandable | Connect new service to exist. transformer if load increases | | |
| Building secondary | ITE and Square D panelboards | varies | Older panels need to be replaced | Limited | Replace remaining older panels | LS | \$ 16,000 |
| Generator | None | | | | Generator not required | | |
| Fire alarm | Edwards EST2 | 1 | Good | Yes | Expand to renovated areas | LS | \$ 8,000 |
| Emergency egress lighting | Self-Contained battery lights and remote head exit discharge lights | 1 | Good | Yes | Only add if egress path changes | LS | \$ 1,600 |
| Technology | Category 5E | 5 | Good | Yes | Expand to new areas | LS | \$ 4,000 |
| Interior lighting | F32 T8 and F40 T12 Fluorescent, incandescent | Varies | Poor to Good | Current lighting controls may need to be expanded to new areas | Provide new energy efficient lighting in new areas | LS | \$ 8,000 |
| Security | None | N/A | N/A | N/A | Provide CCTV similar to other buildings. | LS | \$ 24,000 |
| Devices | Specification Grade | varies | Poor to Good, unrenovated spaces need additional outlets. | Yes | Provide new/additional devices to correspond to renovations | LS | \$ 4,000 |
| SUBTOTAL | | | | | | 5.53 \$/SF | \$ 89,600 |
| TOTAL | | | | | | 15.53 \$/SF | \$ 251,600 |

Introduction

Central HVAC plants are identified as boiler and chiller systems that provide heating and cooling utilities respectively for facilities, typically more than one building. Sometimes referred to as district utilities, the heating medium is often either steam or hot water, while the cooling medium is generally chilled water. FTCC has historically utilized a central plant approach for their main campus facilities. FTCC understands and appreciates the added benefits of central HVAC plant systems, most notably improved efficiency, redundancy, life cycle cost, allowances for diversity and economies of scale. Future facility additions and expansions on the main campus should be, in part, contemplated within the context of the viability of extending or expanding existing central HVAC plant systems already on campus. To assist with those future efforts, existing central cooling and heating systems are summarized below.

Cooling

The following is a breakdown of estimated building cooling loads and system types at significant facilities within core areas of the main campus.

| Building Name | Year Built | Gross Area (SF) | Tons (estimate) | SF/TON (estimate) | Type (current) | Remarks |
|--|------------|-----------------|-----------------|-------------------|-------------------|---------|
| Thompson Learning Resource Center | 1971 | 36,005 | 111 | 325 | Central CHW Plant | 1 |
| McLean Administration Building | 1973/99 | 17,027 | 49 | 350 | | |
| Cumberland Hall | 1976 | 78,168 | 241 | 325 | | |
| Rand Student Center | 1988 | 49,486 | 152 | 325 | | |
| Shaw Virtual College Center | 2005 | 48,766 | 150 | 325 | | |
| Horace Sisk Building | 1964 | 53,925 | 154 | 350 | Central CHW Plant | 2 |
| Culinary Dining | 1964 | 15,786 | 53 | 300 | | |
| Gymnasium | 1964 | 19,995 | 67 | 300 | | |
| Continuing Education Center | 1996 | 75,221 | 215 | 350 | Central CHW Plant | 3 |
| Neill A. Currie Building | 1961 | 10,532 | 30 | 350 | | |
| Center for Business & Industry (CBI) | 1988 | 31,770 | 91 | 350 | Central CHW Plant | 4 |
| Criminal Justice Center #1 (CJC / Cosmetology) | 1964 | 16,201 | 54 | 300 | | |
| Criminal Justice Center #2 (YMCA) | | 31,304 | 104 | 300 | | |
| General CR Building (Service Merchandise) | 1973 | 70,000 | 200 | 350 | CHW | 5 |
| Lafayette Hall | 1961 | 58,929 | 181 | 325 | CHW | 6 |
| Advanced Technology Center | 1991 | 84,412 | 281 | 300 | CHW | 7 |
| Health Technologies Center | 1998 | 66,500 | 205 | 325 | CHW | 8 |
| Early Childhood Education Center | 2001 | 30,597 | 87 | 350 | CHW | 9 |

Notes:

1. CHW piping feeds to each building from separate central plant building. 2 water-cooled chillers. 550 tons plant capacity.
2. CHW piping feeds to each building from central plant in Gymnasium. 2 air-cooled chillers. 300 tons plant capacity.
3. CHW piping feeds to each building from central plant in Continuing Ed. Building. 1 water-cooled chiller. 205 tons plant capacity.
4. Central plant concept installed at CBI. 1 air-cooled chiller. 125 tons plant capacity. CJC#1 only connection thus far. Plant capacity will support future connection to CJC#2 or CBI.
5. Building design underway. System type undecided.
6. 2 water-cooled chillers. 250 ton plant capacity.
7. 1 water-cooled chiller. 240 ton.
8. 1 water-cooled chiller. 125 ton.
9. 2 air-cooled chiller. 100 ton plant capacity.

Heating

The following is a breakdown of estimated building heating loads and system types at significant facilities within core areas of the main campus.

| Building Name | Year Built | Gross Area (SF) | MBH (estimate) | BTU/SF (estimate) | Type (current) | Remarks |
|--|------------|-----------------|----------------|-------------------|------------------|---------|
| Thompson Learning Resource Center | 1971 | 36,005 | 1,440 | 40 | Central HW Plant | 1 |
| McLean Administration Building | 1973/99 | 17,027 | 681 | 40 | | |
| Cumberland Hall | 1976 | 78,168 | 3,127 | 40 | | |
| Rand Student Center | 1988 | 49,486 | 1,979 | 40 | | |
| Shaw Virtual College Center | 2005 | 48,766 | 1,951 | 40 | | |
| Horace Sisk Building | 1964 | 53,925 | 2,157 | 40 | Central HW Plant | 2 |
| Culinary Dining | 1964 | 15,786 | 631 | 40 | | |
| Gymnasium | 1964 | 19,995 | 800 | 40 | | |
| Continuing Education Center | 1996 | 75,221 | 3,009 | 40 | Central HW Plant | 3 |
| Neill A. Currie Building | 1961 | 10,532 | 421 | 40 | | |
| Center for Business & Industry | 1988 | 31,770 | 1,271 | 40 | Gas HVAC | 4 |
| Criminal Justice Center #1 (CJC / Cosmetology) | 1964 | 16,201 | 648 | 40 | Central HW Plant | 5 |
| Criminal Justice Center #2 (YMCA) | | 31,304 | 1,252 | 40 | | |
| General CR Building (Service Merchandise) | 1973 | 70,000 | 2,800 | 40 | HW | 6 |
| Lafayette Hall | 1961 | 58,929 | 2,357 | 40 | HW | 7 |
| Advanced Technology Center | 1991 | 84,412 | 3,376 | 40 | HW | 8 |
| Health Technologies Center | 1998 | 66,500 | 2,660 | 40 | HW | 9 |
| Early Childhood Education Center | 2001 | 30,597 | 1,224 | 40 | HW | 10 |

Notes:

1. HW piping feeds to each building from separate central plant building. 2 cast iron boilers. 9,400 MBH plant capacity.
2. HW piping feeds to each building from central plant in Culinary Dining. 1 cast iron boiler. 3,200 MBH plant capacity.
3. HW piping feeds to each building from central plant in Continuing Ed. Building. 1 cast iron boiler. 4,400 MBH plant capacity.
4. Duct mounted gas heaters.
5. HW piping feeds to each building from central plant in #1 building. 1 cast iron boiler. 3,900 MBH plant capacity.
6. Building design underway. System type undecided.
7. 3 pulse combustion boiler. 2,600 MBH plant capacity.
8. 1 cast iron boiler. 3,600 MBH.
9. 1 cast iron boiler. 2,400 MBH.
10. 1 cast iron boiler. 2,200 MBH.

NORTH CAROLINA COMMUNITY COLLEGE SYSTEM
DIVISION OF FINANCE AND BUSINESS
ADMINISTRATIVE AND FACILITY SERVICES
PROPOSED RENOVATION / REHABILITATION OR CAPITAL IMPROVEMENT PROJECT
FOR THE BIENNium 2009 - 2011

COMMUNITY COLLEGE: Fayetteville Technical Community College **DATE:** 28-May-08
PROJECT IDENTIFICATION: Priority 3 - New Industry Training Center
PROJECT LOCATION/COUNTY: Cumberland County

PROJECT DESCRIPTION & JUSTIFICATION: (Attach additional data as necessary to indicate need, size, function of improvements and master plan.)
New Industry Training Center to consolidate and expand Construction Industry related Curriculum and Continuing Education programs in one facility. The Industry Training facility will also house a new Transportation Center to consolidate automotive repair, small truck repair and autobody programs. Renovate the existing Cumberland Hall to accommodate Fine Arts Curriculum Programs and provide additional General Studies Classrooms in the vacated space and upgrade existing PM&E Building Systems. Renovate the existing Advanced Technologies Center to house the Campus Facility Operations Center in the vacated space. Renovate existing Center for Business & Industry to consolidate Continuing Education Administration and Registration, Customized Training Labs and provide additional Continuing Education Classrooms / Labs in the vacated space and upgrade existing PM&E Building Systems. Renovate the existing Neill Currie Center to accommodate the Military business Center, Small Business Center and a new Small Business Incubator in the vacated space. Renovate the existing Lafayette Hall to accommodate faculty Offices and Campus storage in the vacated space.

CURRENT ESTIMATED CONSTRUCTION COST*

| | QTY | UNIT | COST PER UNIT | TOTAL |
|----------------------------|-----|----------|---------------|--------------|
| A. Land Requirement | 1 | Lump Sum | | \$1,125,000 |
| B. Site Preparation | | | | |
| 1. Demolition | 1 | Lump Sum | | \$235,980 |
| 2. Site Work*** | 1 | Lump Sum | | \$3,545,220 |
| C. Construction | | | | |
| 1. Utility Services** | 1 | Lump Sum | | \$0 |
| 2. Building Construction | 1 | Lump Sum | | \$21,205,100 |
| 3. Plumbing | 1 | Lump Sum | | \$3,207,000 |
| 4. HVAC | 1 | Lump Sum | | \$6,913,200 |
| 5. Electrical | 1 | Lump Sum | | \$3,808,500 |
| 6. Other: _____ | 1 | Lump Sum | | \$50,000 |
| D. Equipment | | | | |
| 1. Fixed | 1 | Lump Sum | | \$0 |
| 2. Moveable | 1 | Lump Sum | | \$4,300,000 |

ESTIMATED CONSTRUCTION COSTS
OWNER'S PROJECT COSTS

| | | |
|------------------------|---|---------------|
| CONTINGENCIES | <u>3</u> % (% of Estimated Construction Costs) | \$ 44,390,000 |
| DESIGN FEE | <u>10</u> % (% of Estimated Construction Costs + Contingencies) | \$ 1,880,000 |
| ESTIMATED COSTS | Sum of Estimated Construction Costs + Owner's Costs + Contingencies + Design Fee) | \$ 4,572,170 |
| | | \$ 52,173,870 |

Escalation % = 0.67 per month multiplied by number of months

(From Est. Date to mid-point of construction) = 24 months 16.08 %

| | |
|---|-----------------|
| ESCALATION COST INCREASE (Estimated Construction Costs x Escalation %) | \$ 8,389,558.30 |
|---|-----------------|

| | |
|---|----------------------|
| TOTAL ESTIMATED PROJECT COSTS (Estimated Costs + Escalation Cost Increase) | \$ 60,563,428 |
|---|----------------------|

* Attach basis and justification for estimate. Include description, quantities, units, special features, similar cost on recent projects, etc.

** Attach explanation of any special building, mechanical, or electrical service requirements with appropriate distance to existing water, gas, electrical or other utility service.

*** Include items such as grading, roads, walks, parking, etc.

APPROVED BY: _____ **TITLE:** _____ **DATE:** _____
